Birk Manufacturing is pleased to announce the achievement of AS9100 Rev C Certification for design and manufacture of flexible heating assemblies, wiring harnesses and thermal systems.

AS9100 is the internationally recognized Quality Management System standard specific to the aerospace, aviation and defense industries. This standard is strongly supported and adhered to by major aerospace OEMs and is being required by vendors within the supply chain on an increasing basis.

AS9100 certification reflects Birk's commitment to meeting and exceeding the increasingly stringent industry requirements for aerospace related products and assures our heaters and thermal system consistently meet the requirements and expectations of customer's presenting the most challenging applications.

This certification strengthens Birk's competitive position and standardizes quality, reliability and safety processes across its aerospace programs. AS9100 is based on the ISO 9001:2008 quality management standard, and provides 80 additional requirements and 18 amplifications specific to aerospace business operations.

According to Carleton Birk, Quality Manager at Birk Manufacturing, "The AS9100 certification is the standard to which aerospace suppliers are measured and reflects the continuous improvement efforts and commitments made by our employees to deliver the highest quality products to our customers. The addition of AS9100 Certification complements Birk's ISO 9001:2008 and ISO 13485:2003 Certifications and highlights the company's focus on supporting the stringent requirements of the aerospace, aviation, defense and medical industries."

Located in East Lyme, Connecticut, Birk Manufacturing is a full-service, privately held, flexible heater manufacturer. Birk manufactures and distributes thermo-foil heaters, wiring harnesses, thermal systems and complex final assemblies.
