

PRODUCT INFORMATION :

Thermal Systems for Medical and Analytical Equipment

Birk Manufacturing realizes the stringent requirements of the medical and analytical equipment industries, their need for high quality control standards, traceability of all components and precise work history of each part manufactured by Birk.

We work very closely with our clients in the development of products and establishment of manufacturing and Quality Control procedure to insure products meet the customer's requirements.

Birk has over 100 years of application engineering experience freely available to our clients in development of new products to meet their specific needs.

Birk can offer customers quick turnaround on new designs because we have in-house capability to perform all the steps in the design and manufacturing process of heaters. We have turned new designs around in a matter of days.

Micro assembly is a common practice as many of the assemblies are built using microscope or TV enlarged image techniques.

Most of the products Birk builds for the medical and analytical industry involve assemblies which can include heat sinks, sensors, switches, fuses, wire harnesses and electronics. Quite often products are performance tested and packaged ready for the customer's inventory.

Birk Manufacturing is an ISO
9001 Certified Company
